Examiner: Michael Smith

Title: **MOVING VIEWPOINT WITH RESPECT TO A TARGET IN A
THREE-DIMENSIONAL WORKSPACE**

Commissioner of Patents and Trademarks
Washington, D.C. 20231

Sir:

INFORMATION DISCLOSURE STATEMENT

Supplemental to the Amendment with Information Disclosure Statement dated November 12, 1992, this Statement submits information that may be material to the examination of this application and in respect of which there may be a duty to disclose in accordance with 37 CFR 1.56.

CS14274 02/23/93 07561627

24-0025

This Statement is being filed more than three months after the U.S. filing date AND after the mailing date of the first Office Action on the merits, but the undersigned believes this Statement is being filed before the mailing date of a Final Rejection or Notice of Allowance. Enclosed is a Transmittal

Letter authorizing payment of the fee of \$200.00 for submission of an information disclosure statement under 37 C.F.R. 1.17(p).

This Statement is not intended to constitute an admission that any information referred to herein is "prior art" in relation to the claimed invention unless specifically designated as such. In accordance with 37 CFR 1.97(g) and (h), the filing of this Statement shall not be construed to mean that a search has been made or that the information submitted herewith is, or is considered to be, material to patentability as defined in 37 C.F.R. 1.56(b).

A list of the enclosed item is set forth on the attached one page of Form PTO-1449. The relevance of the listed item is set forth below.

McLean et al., US-A 5,095,302, describe a three dimensional mouse. Col. 1 line 52-col. 2 line 6 and col. 5 lines 36-68 describe various uses for a third input dimension, allowing the operator to, for example, pick a particular location within a three dimensional isometric graphical display, to control an image "zoom" function (to magnify or de-magnify an object), or to translate an object or a model in a direction orthogonal to the standard 2D screen directions. Fig. 1 shows a mouse. Fig. 2 shows a three-dimensional body on a display screen, illustrating use of X, Y, and Z coordinates to locate a cursor in all three dimensions. Fig. 3 shows how X, Y, and Z inputs generated by mouse movement are transmitted to inputs of a computer for controlling a cursor movement.

The Examiner's attention is also drawn to related Application No. 07/488,587; 07/562,048; and 07/770,196 and the claims and information submitted in relation thereto. Identification of any related application

herein does not waive secrecy as to that application now or upon issuance of the present application as a patent.

The undersigned requests that the Examiner consider the items set forth above and make them of record in this application.

Respectfully submitted,

A handwritten signature in cursive script, appearing to read "James T. Beran", is written over a horizontal line.
